

CONTENTS IN BRIEF

	Preface	xix
CHAPTER 1	Periodic Trends in Fundamental Properties of Atoms and Simple Ions	1
CHAPTER 2	Monatomic Ions and Their Acid–Base Reactivity	43
CHAPTER 3	Polyatomic Ions: Their Structures and Acid–Base Properties	87
CHAPTER 4	Ionic Compounds in the Solid State, in Minerals, and in Solution	165
CHAPTER 5	Trends in Coordination Equilibria	213
CHAPTER 6	Principles of Oxidation–Reduction Reactivity	297
CHAPTER 7	Introduction to Transition Metal Complexes	385
CHAPTER 8	Oxides and Silicates as Materials	445
CHAPTER 9	The Underlying Reasons for Periodic Trends	527
CHAPTER 10	Symmetry	577
CHAPTER 11	Molecular Orbital Theory: A Bridge Between Foundational and Advanced Inorganic Chemistry	611
CHAPTER 12	The Elements as Molecules and Materials	679
	Appendix: Answers to Odd-Numbered Exercises	A-1
	Photo and Figure Credits	C-1
	Index	I-1
