

# CONTENTS

## Preface xix

### CHAPTER 1

#### Periodic Trends in Fundamental Properties of Atoms and Simple Ions 1

- 1.1 The Connections of Inorganic Chemistry to Other Fields of Chemical Science 1
- 1.2 The Periodic Table and Ions of the Elements 2
- 1.3 Core and Valence Electrons; Characteristic Valence Electron Configurations of Atoms and Ions 14
- 1.4 Identifying “Ions” in Chemical Formulas; Assigning Oxidation Numbers 21
- 1.5 Types of Atomic Radii and Their Periodic Trends 25
- 1.6 Periodic Trends in Pauling Electronegativities of Atoms 33
- 1.7 Background Reading for Chapter 1 35
- 1.8 Exercises 36

### CHAPTER 2

#### Monatomic Ions and Their Acid–Base Reactivity 43

- Overview of the Chapter 43
- 2.1 Acidity of Cations 44
- 2.2 Predicting the Acidity Classifications of Cations 49

- 2.3 Explaining the Acidic Tendencies of Cations: Why Halides of Some Cations Fail to React 53
- 2.4 Predominance Diagrams and Nonmetal Hydrides as Acids 60
- 2.5 Predominance Diagrams and the Precipitation of Metal Cations as Oxides or Hydroxides 65
- 2.6 Monatomic Anions as Bases 69
- 2.7 Background Reading for Chapter 2 76
- 2.8 Exercises 76

### CHAPTER 3

#### Polyatomic Ions: Their Structures and Acid–Base Properties 87

- Overview of the Chapter 87
- 3.1 Drawing Lewis Structures (Review); Homopolyatomic Anions 87
- 3.2 The Lewis Acid–Base Concept and Complex Ions 95
- 3.3 Orbital Shapes, Covalent Bond Types, and the Periodicity of Bond Energies 103
- 3.4 Lewis Structures, Maximum Total Coordination Numbers, and Fluoro Anions 118
- 3.5 The Formulas of Oxo Anions 123
- 3.6 The Basicity of Oxo Anions 129

**x** CONTENTS

- 3.7 Predominance Diagrams for Oxo Anions and Oxo Acids 134
- 3.8 Most Common Forms of the Elements in Natural Waters 142
- 3.9 Nomenclature of Oxo Anions and Acids 148
- 3.10 Background Reading for Chapter 3 152
- 3.11 Exercises 152

**CHAPTER 4**

**Ionic Compounds in the Solid State, in Minerals, and in Solution 165**

- Overview of the Chapter 165
- 4.1 Ionic Lattice Types and Radius Ratios 166
  - 4.2 Ionic Solids: Coulombic Attractions and Lattice Energies 177
  - 4.3 Solubility Rules and Tendencies I–IV for Salts of Oxo and Fluoro Anions: Their Geochemical Consequences 183
  - 4.4 The Contrasting Effects of Lattice and Hydration Energies on Salt Solubilities 192
  - 4.5 The Role of Entropy Changes in Precipitation Reactions 199
  - 4.6 Background Reading for Chapter 4 206
  - 4.7 Exercises 206

**CHAPTER 5**

**Trends in Coordination Equilibria 213**

- 5.1 Structural Analysis of Ligands: Monodentate and Chelating Ligands 214
- 5.2 Coordination by Macrocyclic Ligands 227
- 5.3 Bridging Ligands and Metal–Organic Framework Compounds 234
- 5.4 The Hard and Soft Acid–Base Principle 242
- 5.5 Bonding Principles Behind the HSAB Principle and Polar Covalent Bonding 254
- 5.6 HSAB and the Solubilities of Halides and Chalcogenides 258
- 5.7 HSAB and the Biological Functions and Toxicology of the Elements 264
- 5.8 Medicinal Inorganic Chemistry 273
- 5.9 Background Reading for Chapter 5 281
- 5.10 Exercises 282

**CHAPTER 6**

**Principles of Oxidation–Reduction Reactivity 297**

- 6.1 Standard Reduction Potentials and Their Diagrammatic Representation 299
- 6.2 Activity Series of Metals, Nonmetals, and Oxo Anions/Acids 314
- 6.3 Explosions and Safety in the Laboratory 326
- 6.4 Effects of Precipitation, Complexation, and Softness on Oxidizing and Reducing Ability 337
- 6.5 Effects of pH on Redox Chemistry: Pourbaix Diagrams 343
- 6.6 Thermochemical Analysis of Redox Reactions 359
- 6.7 Background Reading for Chapter 6 371
- 6.8 Exercises 372

**CHAPTER 7**

**Introduction to Transition Metal Complexes 385**

- 7.1 Crystal Field Theory 386
- 7.2 High-Spin and Low-Spin Electron Configurations: Magnetic Properties of Metal Ions 391
- 7.3 Electronic Absorption Spectra of *d*-Block and *f*-Block Complex Ions 397
- 7.4 The Spectrochemical Series of Ligands and the Effects of Covalency 402
- 7.5 Thermodynamic and Structural Consequences of Crystal Field Effects 408
- 7.6 Crystal Field Splitting in Complexes of Other Geometries 414
- 7.7 Geometric Preferences; Rates and Mechanisms of Ligand Exchange 423
- 7.8 Heme and Hemoglobin: A Connection to Biochemistry 428
- 7.9 Background Reading for Chapter 7 432
- 7.10 Exercises 432

**CHAPTER 8**

**Oxides and Silicates as Materials 445**

- 8.1 Materials and Their Physical Properties 446
- 8.2 The Structure Types and Physical Properties of the Oxides of the Elements 453

- 8.3 Close Packing of Anions: Isomorphous Substitution in Mixed-Metal Oxides 463
- 8.4 Ferromagnetic, Antiferromagnetic, and Superconducting Solid Ionic Oxides 476
- 8.5 Acidity, Solubility, and Atmospheric Chemistry of Oxides 482
- 8.6 Polysilicates: Basic Structural Types, Uses, and Chemistry 493
- 8.7 Aluminosilicates 505
- 8.8 Background Reading for Chapter 8 514
- 8.9 Exercises 515

## CHAPTER 9

### The Underlying Reasons for Periodic Trends 527

- 9.1 Quantum Mechanics: Wave and Particle Properties of Electrons 527
- 9.2 Shielding, Slater's Rules, and Core and Valence Electrons 537
- 9.3 Periodic Trends in Ionization Energies and Electron Affinities 546
- 9.4 Calculations of Atomic Radii and Reasons for Their Periodic Trends 550
- 9.5 Periodic Trends in Electronegativities of Atoms: Explanation and Theoretical Prediction 558
- 9.6 Relativistic Effects on Orbitals 562
- 9.7 Background Reading for Chapter 9 568
- 9.8 Exercises 568

## CHAPTER 10

### Symmetry 577

- 10.1 Symmetry Operations and Elements 579
- 10.2 Molecular Point Groups, Polarity, and Chirality 585
- 10.3 Character Tables for Symmetry Point Groups 593
- 10.4 Symmetry Labels for Bonding and Antibonding Orbitals in Diatomic Molecules 599
- 10.5 Background Reading for Chapter 10 603
- 10.6 Exercises 604

## CHAPTER 11

### Molecular Orbital Theory: A Bridge Between Foundational and Advanced Inorganic Chemistry 611

- Overview of the Chapter 611
- 11.1 Molecular Orbital Theory for Homonuclear Diatomic Molecules 612
- 11.2 Orbital Mixing in Homonuclear Diatomic Molecules: Bond Energies and Bond Lengths 621
- 11.3 Electronic Spectroscopy and Molecular Orbital Theory 626
- 11.4 Heteroatomic Diatomic Molecules and Ions 633
- 11.5 Molecular Orbitals for Selected Two- and Three-Dimensional High-Symmetry ( $D_{nh}$ ,  $T_d$ , and  $O_h$ ) Complexes and Molecules 640
- 11.6 *d*-Block Organometallic Compounds: The Role of  $\sigma$ -Donor,  $\pi$ -Donor, and  $\pi$ -Acceptor Ligands 649
- 11.7 Background Reading for Chapter 11 666
- 11.8 Exercises 666

## CHAPTER 12

### The Elements as Molecules and Materials 679

- 12.1 Elemental Substances: Structures and Physical Properties 680
- 12.2 Molecular Orbital Theory and Conductivity Properties of Linear Oligomers and Polymers of Elements 689
- 12.3 Allotropes of the Nonmetals 700
- 12.4 Metals and Alloys 710
- 12.5 Inorganic Materials That Are Structurally Related to Carbon Allotropes 722
- 12.6 Summary Overview of Relationships Among Ionic, Covalent, and Metallic Structures and Bonding 728
- 12.7 Background Reading for Chapter 12 730
- 12.8 Exercises 731

### Appendix: Answers to Odd-Numbered Exercises A-1

### Photo and Figure Credits C-1

### Index I-1
