Preface *xi*

1 *The Interstellar Medium* ***1***

- 1.1 States of Matter in the ISM 2
- 1.2 Interactions between Stars and the ISM 3
- 1.3 Chemical Abundances in the ISM 5
- 1.4 The Coupling between Interstellar Matter and Radiation 7
- 1.5 Emission Nebulae and the Ionized Component of the ISM 9
- 1.6 Reflection Nebulae 12
- 1.7 Dark Clouds and Molecular Clouds 14
- 1.8 Diffuse Interstellar Clouds and Infrared Cirrus 14
- 1.9 Hot Gas and Galactic Corona 17
- 1.10 Multiple Phases of the ISM 17
- 1.11 Summary 20

2 *Fundamental Concepts of Radiation* ***21***

- 2.1 Intensity 22
- 2.2 Flux 24
- 2.3 Moments of Intensity 29
- 2.4 Thermodynamic Equilibrium vs. Steady State 30
- 2.5 Blackbody Radiation 34
- 2.6 The Equation of Transfer 36
- 2.7 Solutions to the Equation of Transfer 40
- 2.8 Numerical Solution to the Equation of Transfer 44
- 2.9 Scattering 46
- 2.10 Polarization 49
- 2.11 Summary 49

3 *Measurements of Radiation* 53

- 3.1 Flux Measurements 54
- 3.2 Measurement of Intensity 61
- 3.3 Spectroscopy 73
- 3.4 Summary 74

4 *Photoionization and Recombination* 77

- 4.1 The Hydrogen Atom 78
- 4.2 Spectroscopic Notation 80
- 4.3 Bound-Free Transition 85
- 4.4 Bound-Free Absorption in a Stellar Atmosphere 87
- 4.5 Recombination 89
- 4.6 Ionization Structure of a Static Nebula 92
- 4.7 Diffuse Interstellar Radiation Field 94
- 4.8 Ionization of Complex Atoms 96
- 4.9 A Dielectronic Recombination 97
- 4.10 Charge-Exchange Reactions 99
- 4.11 Summary 99

5 *Line Radiation from Atoms and Ions* 103

- 5.1 Permitted and Forbidden Transitions 104
- 5.2 Transitions within Multiplets 113
- 5.3 Fine-Structure Lines 115
- 5.4 Hyperfine Lines 122
- 5.5 Absorption and Emission 125
- 5.6 Spectral Line Formation 127
- 5.7 Scattering Cross Sections 132
- 5.8 Line Broadening 136
- 5.9 The Voigt Profile 139
- 5.10 Equivalent Width and the Curve of Growth 141
- 5.11 Recombination Lines 142
- 5.12 Collisionally Excited Lines 151
- 5.13 Resonance Fluorescence 160
- 5.14 Recombination Lines of Metals 161
- 5.15 Statistical Equilibrium and Population Distribution 163
- 5.16 Determination of Nebular Density and Temperature by Diagnostic Diagrams 163
- 5.17 Atomic Parameters 164
- 5.18 Abundance Determination by Absorption Spectroscopy 165

5.19	Abundance Determination in Emission Nebulae	166
5.20	Summary	167

6 *Continuum Radiation in the Gas Phase* 171

6.1	Free-Bound Continuum Radiation	171
6.2	Two-Photon Radiation	172
6.3	Free-Free Continuum Emission	176
6.4	Electron Scattering	181
6.5	Heating and Cooling of Photoionized Regions	182
6.6	Determination of the Temperature of the Central Star by Nebular Properties	185
6.7	Summary	186

7 *Interstellar Molecules* 189

7.1	Molecular Transitions	192
7.2	Electronic Structures of Molecules	192
7.3	Molecular Orbitals and Hybridization	195
7.4	Rotational Transitions	196
7.5	Vibrational Transitions of Diatomic Molecules	200
7.6	Electronic Transitions	204
7.7	Effects of Nuclear Spins on Rotational Spectra	206
7.8	Rotational Spectra of Symmetric Tops	218
7.9	Asymmetric Rotators	224
7.10	Radicals	236
7.11	Molecular Ions	247
7.12	Molecules Containing Metals	249
7.13	Raman Scattering	252
7.14	Summary	254

8 *Vibrational Spectroscopy of Polyatomic Molecules* 257

8.1	Linear Molecules	258
8.2	Symmetric Tops	264
8.3	Asymmetric Tops	268
8.4	Carbon Chains	270
8.5	Polycyclic Aromatic Hydrocarbons	275
8.6	Summary	277

9 *Molecular Excitation and Abundance Determination* 279

- 9.1 Partition Functions and Thermal Distribution 279
- 9.2 Deriving the Rotational Excitation Temperature 281
- 9.3 Excitation of Molecules 281
- 9.4 Deriving Molecular Abundance from Line Observations 285
- 9.5 A Two-Level Molecule under Collisional Excitation 287
- 9.6 A Two-Level Molecule under Collisional and Radiative Excitation 289
- 9.7 Optically Thick Lines and Non-LTE Population Distribution 291
- 9.8 Molecular Abundance by Absorption Spectroscopy 293
- 9.9 Ortho/Para Ratios 295
- 9.10 Isotopic Abundance 295
- 9.11 Isomers 296
- 9.12 Conformers 300
- 9.13 Summary 301

10 *Interstellar Grains: Physical Processes* 303

- 10.1 Interstellar Extinction 305
- 10.2 Dust Absorption and Scattering 308
- 10.3 Dust Emission 311
- 10.4 Thermal Coupling between the Dust and Gas 318
- 10.5 Reflection and Scattering 319
- 10.6 Dust Absorption in the X-Ray Region 320
- 10.7 Stochastic Heating 321
- 10.8 Interstellar Polarization 322
- 10.9 Photoelectric Effect 323
- 10.10 Grain Processing 323

11 *The Chemical Composition of Interstellar and Circumstellar Grains* 327

- 11.1 Optical Properties of Solids 328
- 11.2 Inorganic Compounds 329
- 11.3 Organic Compounds 343
- 11.4 Summary 352

12 *Carbonaceous Grains* 353

- 12.1 The Aromatic Infrared Bands 357

12.2	The 2175-Å Absorption Feature	366
12.3	The Diffuse Interstellar Bands	367
12.4	Extended Red Emission	368
12.5	The 21- μm Feature	371
12.6	The 30- μm Feature	372
12.7	Plateau Features	373
12.8	Photochemistry	375
12.9	Summary	376

13 *The Origin of Interstellar Dust* 377

13.1	The Formation of Dust in the Atmospheres of AGB Stars	378
13.2	Models of Carbonaceous Dust	379
13.3	Laboratory Simulations of Cosmic Dust	381
13.4	UV Processing of Ices	385
13.5	Interstellar Dust and the Solar System	387
13.6	Possible Enrichment of the Solar System by Interstellar Grains	395
13.7	Summary	396

14 *Chemical Reactions in the ISM* 397

14.1	An Example: CO Chemistry	397
14.2	Photodissociation	401
14.3	Attenuation of the Radiation Field	404
14.4	Cosmic Ray Ionization	407
14.5	Gas-Phase Reactions	407
14.6	A Rate Equation	413
14.7	Photon-Dominated Regions	414
14.8	Grain-Surface Chemistry	418
14.9	Summary	423

15 *Gas Dynamics, Gravitational Collapse, and Stellar Winds* 425

15.1	Hydrodynamical Equations	425
15.2	Self-Gravitating Hydrostatic Spheres	429
15.3	The Virial Theorem	435
15.4	Pressureless Gravitational Collapse	437
15.5	Gravitational Instability	438
15.6	Stellar Winds from Hot Stars	440
15.7	Winds from AGB Stars	448

15.8	Systematic Motions in Star Formation Regions	454
15.9	Summary	456

16 *Interaction between Stars and the Interstellar Medium* 461

16.1	Supersonic Dynamics	461
16.2	Supernova Remnants	466
16.3	Interstellar Bubbles	470
16.4	Interacting Stellar Winds	477
16.5	The Momentum Paradox	486
16.6	Summary	488

17 *Beyond the Galaxy* 491

17.1	Overall Structure of the ISM	491
17.2	Radiative Interactions between Different States of Matter	492
17.3	Application to Extragalactic Astronomy	494

APPENDIX **1** *Vector Formulae in Different Coordinate Systems* 509

APPENDIX **2** *Ionization Potentials for Atoms and Molecules* 511

APPENDIX **3** *List of Interstellar Molecules* 517

APPENDIX **4** *Solutions to Selected Exercises* 521

Symbols and Abbreviations 535

Glossary 541

References 545
