

Contents

1	Chapter 1: Introduction, Background, and Preview	13
1.1	Introduction	13
1.1.1	The current domain of known life	14
1.1.2	A (very) brief history of normal matter	15
1.1.3	Stars	16
1.1.4	Planets	18
1.1.5	Our Solar System	20
1.1.6	Our Sun	21
1.1.7	Exoplanets	22
1.1.8	Life and Habitats	24
1.2	Preview	27
2	Chapter 2: Star formation and proto-stellar collapse	29
2.1	Introduction	29
2.2	A brief cosmography	30

2.3	Observed proto-stellar structures	31
2.3.1	The four stages of star formation	33
2.4	Proto-stellar collapse	33
2.4.1	The Virial Theorem	34
2.4.2	Collapse	36
2.5	Outside-in versus inside-out star formation	39
2.5.1	Classical Fragmentation: an example of technique	40
2.5.2	Inside-out star formation	43
2.6	Triggering collapse	46
2.7	Angular Momentum in Collapse	46
2.7.1	Conservation of angular momentum	48
2.8	Orbital Basics	48
2.9	Disk Evolution	50
2.9.1	Energy minimization and angular momentum conservation	50
2.9.2	Kinematic and Turbulent Viscosity	52
2.10	Binary and multiple star systems	54
2.11	Brown dwarfs to planets	55
3	Chapter 3: Planet Formation	61
3.1	Introduction	61
3.2	Planet classes and formation scenarios	62

<i>CONTENTS</i>	5
3.2.1 Gas-giants and Ice-giants	62
3.2.2 Formation scenarios	64
3.2.3 Terrestrial/Rocky Planets	65
3.3 Coagulation of solids	66
3.3.1 Gravitational focussing	67
3.3.2 Size distributions	70
3.3.3 Coagulation Equations	71
3.4 Stages of growth	72
3.4.1 Velocities and Equipartition	74
3.4.2 The endpoints of growth	75
3.5 The rate of formation as a function of position	78
3.5.1 The Minimum Mass Solar Nebula	78
3.5.2 The temperature structure of the proto-planetary disk	79
3.5.3 Implications of snow-line for giant planets	81
3.5.4 Further implications - water delivery	81
3.6 Planetesimal and Proto-planet migration	82
3.6.1 Disk drag	82
3.6.2 Planet Migration	83
3.6.3 Consequences and complications of planetary migration	87
3.7 Final stages of planet formation	87

3.7.1	Photoevaporation of the disk gas	87
3.7.2	Late stage dynamics	88
3.7.3	Internal differentiation and late-time bombardment	89
3.7.4	Debris disks	90
3.8	Planet formation summary	90
4	Chapter 4: Exoplanets	95
4.1	Introduction	95
4.2	Indirect Planet Detection	96
4.2.1	The basic problem	96
4.2.2	Dynamical perturbations	98
4.2.3	Relativistic Doppler shift and radial velocity measurements	99
4.2.4	Inclination	100
4.2.5	Position wobble	101
4.2.6	Application of dynamical measurements	102
4.2.7	Observed exoplanet systems	103
4.2.8	Gravitational Microlensing	106
4.2.9	Magnification	107
4.2.10	Interpreting microlensing events	108
4.2.11	Planet-star microlensing	109
4.2.12	Practical micro-lensing	111

<i>CONTENTS</i>	7
4.2.13 Transits and Eclipses	111
4.2.14 Planet Transits	112
4.2.15 Transit probability	113
4.2.16 Transit Duration (revisited)	114
4.2.17 Transit lightcurves and other effects	116
4.2.18 The proto-type: Transiting planet of HD 209458	117
4.2.19 Planet “Weather”	119
4.2.20 Secondary Eclipse	119
4.3 Direct Planet Detection and Imaging	120
4.3.1 Phase curve photometry	120
4.3.2 Nulling Interferometry	122
4.3.3 Coronagraphy	123
4.3.4 Planet imaging and interferometry	125
5 Chapter 5: Life: a brief history, and its boundaries	129
5.1 Introduction	129
5.2 Two histories	130
5.3 What is terrestrial life ?	131
5.3.1 Scales and Structures	131
5.3.2 The common thread	133
5.3.3 The Tree of Life	136

5.3.4	Chirality: the handedness of life	138
5.4	The history of life on Earth	139
5.4.1	Implications for astrobiology	141
5.4.2	A changing planet	141
5.5	Boundary conditions and habitability	143
5.5.1	Overview of extremophiles	143
5.5.2	Types of extremophiles:	143
5.5.3	Hyperthermophiles to Psychrophiles	145
5.5.4	Biochemical mechanisms for survival	148
5.5.5	Radioresistance	149
5.5.6	Spores and survival	150
5.6	Deep Life	151
6	Chapter 6: Planetary radiation, comparative planetology, biosignatures, and Daisyworld	155
6.1	Introduction	155
6.2	The reflectivity of a planet: albedo	156
6.3	The thermal characteristics of a planet	157
6.4	Interpreting reflected light from planets	159
6.4.1	Geometric Albedo	159
6.4.2	Spherical Albedo	159

<i>CONTENTS</i>	9
6.4.3 Bond Albedo	160
6.4.4 Application	161
6.5 Total observed flux	162
6.6 Comparative Planetology	163
6.6.1 Planetary atmospheres	163
6.6.2 Atmospheric loss	165
6.6.3 Planetary Spectra	168
6.7 The impact of life: biosignatures	171
6.7.1 Atmospheric signatures	173
6.7.2 The Vegetation Red Edge	174
6.8 Daisyworld	176
6.9 Introducing the daisies	176
6.9.1 The model equations	177
6.9.2 Putting the model to work	179
6.10 Variations	184
6.10.1 Evolving daisies	185
6.11 Concluding thoughts	186
7 Chapter 7: Cosmochemistry, dust, and prebiotic molecules	191
7.1 Introduction	191
7.2 Elements and materials	192

7.3	The origin of dust	193
7.3.1	Order-of-magnitude estimate for grain growth rate	194
7.3.2	Growth rate without gas depletion	195
7.3.3	Growth rate with depletion	197
7.4	The Circumstellar Medium	200
7.4.1	Circumstellar dust formation	200
7.5	Nucleation	202
7.6	Dust or molecule ?	203
7.6.1	Polycyclic Aromatic Hydrocarbons	204
7.7	Formation of complex molecules	205
7.7.1	Fundamental processes: H_2 formation	207
7.7.2	Routes to complex molecules: Ion-molecule chemistry	210
7.7.3	Influence of the proto-stellar environment: Hot core chemistry	211
7.7.4	Prebiotic molecules	212
8	Chapter 8: Comets, meteorites, and proto-planetary disk structure	215
8.1	Introduction	215
8.2	Comets	216
8.3	Meteorites	218
8.4	Late time impactors and early Earth chemistry	221

<i>CONTENTS</i>	11
8.4.1 Chirality	222
8.4.2 Impact events on the Earth	224
8.4.3 Impact events on other bodies	227
8.5 Chemistry of the proto-planetary disk	229
8.5.1 Basic disk structure and chemistry	229
8.5.2 Radiation and chemistry	231
8.5.3 Disk chemistry and planet formation	232
9 Chapter 9: Habitable Zones	235
9.1 Introduction	235
9.2 The classical circumstellar habitable zone (CHZ)	236
9.2.1 The Greenhouse Effect	238
9.2.2 Optical depth and the greenhouse	239
9.2.3 The Carbon-Silicate Cycle	241
9.3 Habitability through time	244
9.3.1 The Faint Young Sun paradox and the continuously habitable zone	244
9.3.2 Modeling habitability	245
9.3.3 Impact events	249
9.3.4 Injection of atmospheric dust	250
9.3.5 Climate: features and models	253
9.4 Additional factors	254

9.4.1	Lunar tidal influence	255
9.4.2	Planet obliquity	259
9.4.3	The influence of giant planets on habitability	261
9.4.4	The origin of water on terrestrial worlds	261
9.5	The Galactic Habitable Zone	263
9.5.1	Heavy elements and the Goldilocks zone	264
9.5.2	Supernova are bad ?	265
9.5.3	Mapping the GHZ	266
9.5.4	Beyond the Galaxy	267
9.5.5	The Universe and beyond	267
10	Chapter 10: Alternate Habitable Zones and Beyond	271
10.1	Introduction	271
10.2	Earth: but not as we know it	272
10.3	Moons	274
10.3.1	Europa	276
10.3.2	Exomoons	277
10.4	Elemental constraints on life	281
10.5	Speculations on the origins of life	284
10.5.1	The universality of bio-mechanics	287
10.6	Concluding commentary and cautions	289
